

Stop the struggle.

You don't need to struggle with complicated and expensive CAD software. No need to learn and re-learn complicated software for complex highway interchanges and other things you don't do.

RoadEng®

All your county projects made simple.

New roads | Realignments | Widening projects | Bridge site design
Culvert replacements | Earthwork calculations | Construction cost reduction features

Quick learning curve. Easy to learn, easy to use. 90% of RoadEng users require no formal training. Learn on your own, and access unlimited technical support when you need it.

Design start to finish. Enter survey data. Create and manipulate accurate terrain models. Engineer complete road and site designs. Create PDF output sheets.

Compatible engineering tool. Easily share DWG, DGN, and LandXML files with other programs. RoadEng works alone, or it can integrate into other CAD or GIS-based engineering systems.

Everything you need. Nothing more.

A simple user interface. Dynamic update of all windows. Customizable layouts. RoadEng is the light, fast, and intuitive design software you've been looking for.

**Spend less on licensing.
Spend less on construction.
Software built to save your county money.**

Perpetual licensing means the software is yours to keep.

Buy it once. Own it forever. Maintain RoadEng without having to pay huge annual subscription fees.

Know your sub-grade construction cost and reduce it.

With earthwork costing data as you design, you can adjust your design based on cost. Know preliminary construction costs before you go to tender.

Detailed earthwork movement schedule for construction jobs.

Increase efficiency by tracking and reporting material movement. Graphically analyze material movement and reduce construction costs.

RoadEng®

System Requirements:

- Windows 7, 8, 8.1, or 10 Operating System
- 2 GB system RAM (4 GB recommended)
- Min. 800 x 600 resolution (more recommended)
- Processor or motherboard built-in video is adequate
- 1 GB disk space

Reads/Writes:

- AutoCAD® DWG / DXF
- Land XML
- XYZ ASCII Points
- ESRI ArcGIS® Shape

Thousands of civil engineers throughout North America have already found that we're the best way to go.
